Over 12 million people suffer from Peripheral Artery Disease – PAD and are four times more likely to die of a heart attack or have a stroke. As we age, our arteries become less flexible and the build up of plaque can occur.

This may greatly reduce or limit blood flow in your legs. Plaque can also accumulate in your carotid or neck artery limiting blood flow to the brain which could cause a stroke. This is a simple non invasive ultra sound of the carotid artery, aorta and legs that can be completed in less than 30 minutes.
